STOELZLE WYMIARKI Sp. z o.o., ul. Ks. Witolda 11, 68-131 Wymiarki; Poland

Wymiarki, dnia 07.02.2022 r.

Dear customer,

Quality tests for all our products are carried out according to the Article Card, which specifies the parameters along with the tolerance, placed on the technical drawing.

The frequency of measurements depends on the type of article. For this purpose, a Measurement Frequency chart is drawn up before production, according to which the individual parameters are checked.

For the beer mug with assortment number 04533 81 33 85, the following parameters are controlled during the production process:

- Weight [g],
- Brimful capacity [ml]
- Total capacity [using a template obtained by mapping a beer can 1 : 1]
- Height [mm]
- Finish height [mm]
- Finish diameter [mm]
- Bore diameter [mm]
- Body diameter [mm]
- Thermal shock [°C]
- Impact test / strength
- Annealing

Kind regards the Quality Department of STOELZLE Wymiarki

Marta Kozłowska-Petersen
